

# RewardWallet

By Nathan Tannar, Mandy Xiao, Molly Bin

#### What

A system that keeps track of transactions users make at a business to allocate rewards to a customer's profile based on how the business customizes their distribution model.

### Why

By creating the hardware needed by a business, a mobile app for the user and a cloud system to bring it all together, RewardWallet gives business owners an end-to-end solution for adding a customizable digital loyalty system to their store.

#### Flow Chart

RewardBeamer to initiate a transaction  2. RewardBeamer Sends POST request to the Cloud API  3. Cloud API Creates a transaction for the business  4. RewardBeamer Configures the NFC controller to act as a serial tag
Sends POST request to the Cloud API     Creates a transaction for the business     Configures the NFC controller to act as a serial tag
Cloud API  3. Cloud API  Creates a transaction for the business  4. RewardBeamer  Configures the NFC controller to act as a serial tag

act as a serial tag
5. Mobile App Sends a POST request with the
transaction token ID to the
Cloud API
6. Cloud API Determine the amount of points
to allocate. Sends an update
point balance to the user and
closes the transaction.
7. Mobile App Receives updated point balance

## Conclusion

RewardWallet provides an intricate yet affordable solution for small and medium businesses that lack the infrastructure for developing their own reward system. This easily integratable solution will revolutionize the relationship between businesses and their customers.

#### **Future Work**

- 1. A maps section which will indicate to users participating businesses in the area.
- 2. Allow customers to use their points to redeem rewards or discounts from stores.
- 3. QR codes will be added as an alternative means to redeem points.
- 4. Mobile ordering will be available.
- 5. We will also create an iPad application for businesses.
- 6. Advanced reward distribution models
